Integrated Shipping Intelligence℠

See beyond the data

Find the savings you've been looking for
Data Collection

The RateLinx shipping solution has an approach to logistics management unlike any other. The foundation of the Enterprise Suite is built on data collection. Only RateLinx connects order data, shipment data and invoice data with our dynamic Intelligent Invoice Management[SM] payment system.

Diagnostics

ShipLinx TMS

ShipLinx TMS software is the heart of the RateLinx Enterprise Suite. Customized to your preferences, our transportation management system integrates with any ERP/WMS. Processing shipments is faster and less costly. Data collection can include order number, customer ID, item number or any data capture you find helpful.

Planning and Execution

ShipLinx TMS plans the order and executes the shipment for greater efficiency and savings. ShipLinx and ShipLinx4 are available as technology only.

- Multi-carrier, multi-modal, multi-location
- Multiple rate bases
- Cloud- or premise-based
- Auction Module and Supplier Portal available
- 25 to 250,000 packages/day

## Customized

Integrated

Dashboard

Dashboard supply chain visibility software is a suite of standard reports, dynamic reports and graphical KPIs. Customized with your own goals and constraints, it converts shipment and order data into actionable intelligence.

In real-time, you'll monitor logistic networks, see optimization opportunities, track savings, measure success, and answer the infamous question, "Why are my freight costs up?" Real-time allows quicker action for quicker savings.

Integrated Shipping Intelligence

Our Enterprise Suite stands apart from other logistics solutions because all RateLinx software and services are integrated together. When it's time for rate sourcing, the Rate Modeling Engine and predictive analytics are unsurpassed. That's why we call it Integrated Shipping Intelligence[SM].

ShipLinx TMS

Predictive Modeling
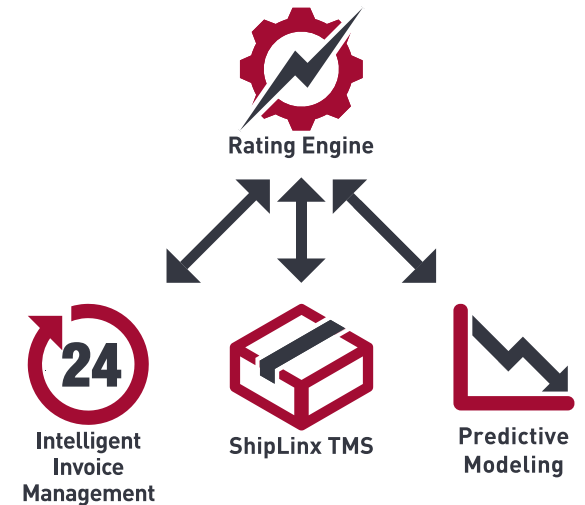

To get started, RateLinx shows the potential savings with current carriers. We look beyond the common rate base to create individualized, custom bid packages. Any particular benchmarks can be added such as by location, direction, ship-to customer or product type and put back into the engine to rerate selected carriers.

Actionable intelligence removes risk for carriers and shippers; significantly reduces freight costs.
